

Foam-On-Rod Head Restraint Assembly Seating

In our conventional headrest process, the foam is first produced in a mold and then covered with fabric. By integrating the entire process in our manufacturing facilities we are able to ensure the highest craftsmanship quality at the best value.

Applications

- + Headrests

Advantages

- + Superior finished appearance
- + Improved environmental performance
- + Reduced cost

Foams

- + High-Resiliency Foam
- + Energy Management Foam
- + Dual Hardness Foam
