

# Compressor Shield

**Ac**  
Acoustic

To achieve the multiple goals of effective acoustic control, water resistance and lightweight construction at a reasonable cost, Woodbridge Compressor Shields are the answer. Constructed of rugged Polyethylene Terephthalate (PET), the shields reduce compressor noise transmitted to the passenger compartment while protecting the compressor assembly from rain and snow. They also reduce compressor exposure to road salt in winter weather conditions and can be readily designed to fit a variety of packaging configurations.

## Applications

- + Exterior systems

## Advantages

- + Rugged PET construction offers outstanding acoustic control and water resistance while contributing to vehicle weight goals
- + Reduces compressor noise transmitted to the passenger compartment
- + Protects the compressor assembly from rain and snow and reduces road salt exposure in winter weather conditions
- + Custom-fit to meet individual packaging requirements
