

TrimVisible™

The TrimVisible™ family of foam products are designed to improve the appearance of trimmed seat assemblies by providing a visual transition between exposed seating components. This innovative black foam solution integrates several new benefits while providing the same high-quality seat cushioning performance.

TrimVisible foam provides a significant reduction in the contrast between the foam, trim, and other exposed components by making the entire area recede into the shadow. It eliminates the need for costly traditional methods of improving the appearance of trim apertures.

Applications

- + Seating

Advantages

- + Provides a superior finished trim appearance
- + Lower cost solution to secondary countermeasures
- + Repeatable performance
- + Increases trim design flexibility
