

Wheel Liner

Ac
Acoustic

In their function as Woodbridge Acoustic and Lightweight Solutions, Wheel Liners also have the capability to handle vehicle airflow and deflect water. For outstanding responsiveness to individual customer needs, a choice of materials and custom material weights allows tailoring solutions to specific cost points or exacting Noise, Vibration and Harshness (NVH) requirements. Available materials include:

- + High-Density Polyethylene (HDPE) that offers high performance in a cost-effective solution and is 100 percent recyclable
- + Polyethylene Terephthalate (PET) that can be used alone or in combination with strategically positioned NVH supplements for superior NVH control
- + PET bilaminate that offers outstanding water repellency and NVH control

Applications

- + Exterior systems

Advantages

- + A wide choice of materials and weights to custom tailor solutions to the specific application
